

Congratulations to researchers at China's Dalian Polytechnic University and the School of Environmental Science and Engineering at Shandong University. Utilizing CHEMetrics COD water analysis test kits, they recently determined nanogels may be applied to treat pulp bleaching water in a way that makes current wastewater treatments more efficient and environmentally sustainable.

Thanks to these scientists for their work supported in part by the National Science Foundation of China and the Natural Science Foundation of Liaoning. We're proud to have played a small part in ushering in this advance.
